Art Unit: 2181

1. This is responsive to the amendment filed on 12/17/02.

New claims 8-9 have been added. Therefore, claims 1-9 are pending in this application.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 2-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Culley et al. (5,101,497).

As per above claims, Culley discloses the invention as claimed comprising; a programmable section fed by the interrupt signals for selecting assertion sense and/or

assertion type of each one of the interrupt sign and for storing a bit for each one of the interrupt logic signals representative of whether the logic state of the interrupt signal should be or should not be converted and for producing a corresponding output logic interrupt signal in accordance therewith (abstract, col. 5, lines 22-29 and fig. 4)

4. Claims 2-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Kardach et al. (5,535,420).

As per above claims, Kardach discloses the invention as claimed comprising; a programmable section fed by the interrupt signals for selecting assertion sense and/or assertion type of each one of the interrupt sign and for storing a bit for each one of the interrupt logic signals representative of whether the logic state of the interrupt signal should be or should not be converted and for producing a corresponding output logic interrupt signal in accordance therewith (abstract, col.5, lines 1-34, and col. 6, line 49 to col. 7, line 42).

5. Claims 2-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Nelson et al. (5,819,096).

As per above claims, Nelson discloses the invention as claimed comprising: a programmable section fed by the interrupt signals for selecting assertion sense and/or assertion type of each one of the interrupt (abstract).

6. Claims 1 and 5-9 are allowed.

7. Applicant's arguments with respect to claims 1-7 have been considered but are moot in view of the new ground(s) of rejection.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Xuong M. Chung-Trans whose telephone number is (703) 305-9772. The examiner can normally be reached on Monday from 9:30am to 2:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Reinhart, can be reached on (703) 305-4815. The fax phone number for the organization where this application or proceeding is assigned is (703) 746-7239.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 305-3900.
